

### Comprehensive security shield

Mission Control Application Gateway, Mission Control Firewall, Mission Control Internet Proxy, **Mission Control Security Gateway**, Mission Control Passport, Mission Control Intrusion Detection, Mission Control Email Shield, Mission Control Virus Protection, Mission Control Client VPN, Mission Control Wireless Zone Protector

## Mission Control WAN Management Datasheet Description

Mission Control WAN Management Service allows separation of security and transportation layers, giving maximum flexibility while simplifying secure WAN operations. The highly flexible combination of the WAN Service and the Security Gateway enables **mixed provider** for the company wide WAN with only one **single point of contact**.

For each location, the most suitable solution regarding transport layer, **business continuity, quality of service and performance** is selected. The business continuity concept enables a **mixed provider operation** eliminating single point of failure and maximizing uptime.

Unique monitoring capabilities of Mission Control Security Gateways and redundant Mission Control Data Centers ensure efficient detection and debugging in case of quality degradation or connectivity loss. Analysis and reporting simplify capacity management and planning.

The Mission Control WAN Managed Service gives the **freedom of provider choice** at the full **price transparency**. Economically independent monitoring and reporting of each provider's availability and quality combined with benchmarking assure sustainable quality control.

### Configuration

The Managed WAN Service is available in various configurations depending on sites requirements:

- single provider
- dual provider, both Internet based
- dual provider, MPLS and Internet based
- primary provider with secondary back-up via terrestrial or satellite links

The price is the same independent of the chose configuration
